Sara Ibrahim Omran

Generative & Agentic AI | Data Analyst | Python, SQL, Machine Learning | Telecom Domain Expertise

Al Jizah, Egypt

Summary

Results-driven Telecom Engineer with 3+ years of hands-on experience in RAN Front Office and Back Office operations across multi-vendor environments (Huawei, ZTE, Ericsson). Strong background in network troubleshooting, KPI analysis, and configuration for 2G/3G/4G/5G networks, supporting high-availability, large-scale telecom systems.

Currently working at Huawei GNOC, where I contribute to real-time incident resolution, nationwide RAN integrations, and performance tuning—helping improve overall network uptime by ~10%. I was promoted from Front Office to Back Office, becoming the first engineer in my department to achieve this transition, reflecting strong technical depth, reliability, and ownership.

I have graduated from ALX's Data Analyst Program, where I built a strong foundation in data analysis, SQL, Python, and business-oriented analytics. I am continuing my learning in Machine Learning through ALX, focusing on applying predictive and automation techniques to real-world problems.

In parallel, I recently joined DEPI's Generative & Agentic AI Program, an intensive, hands-on industry training covering:

-Machine Learning & Deep Learning fundamentals

-Transformers, LLMs, and Generative AI (LoRA, PEFT, Diffusion models)

-Advanced Prompt Engineering & reasoning workflows

-Agentic AI, multi-agent systems, RAG & memory architectures

-AI deployment, monitoring, scalability, and governance

-Capstone project focused on real-world AI system implementation

My academic and practical background bridges telecom engineering and data-driven problem solving. My graduation project focused on 3G/4G capacity optimization using Python, and I bring a strong interest in using AI and automation to optimize network performance and user experience.

Career Interests:
RF Optimization • RF Planning • Performance Engineering • Data-Driven Network Optimization • AI Applications in Telecom

Key Skills:
RAN Optimization • KPI Analytics • Python • SQL • Machine Learning • Generative AI • Agentic AI • Huawei & ZTE Tools • 5G Networks • Automation Mindset

Let’s connect if you’re looking for a telecom engineer who combines deep network expertise with data science and modern AI capabilities.

Experience

Digital Egypt Pioneers Initiative - DEPI
Generative & Agentic AI Trainee (Part-time Internship)
November 2025 - Present (1 year)
Al Jizah, Egypt

Participating in a part-time, industry-focused Generative & Agentic AI internship alongside my professional telecom role. The program emphasizes hands-on implementation and real-world AI systems, with a strong focus on scalable, ethical, and production-ready solutions.

Key Areas & Contributions:

Applied Machine Learning and Deep Learning fundamentals to practical problem-solving scenarios

Worked with Transformers and Large Language Models (LLMs) including GPT-based architectures

Implemented Generative AI techniques such as fine-tuning (LoRA, PEFT), diffusion models, and prompt-based generation

Designed advanced prompting and reasoning workflows, including multi-step reasoning and function calling

Built Agentic AI systems, covering tool usage, planning, memory, and safety mechanisms

Developed multi-agent workflows focusing on coordination, cooperation, and orchestration

Implemented Retrieval-Augmented Generation (RAG) systems with memory and re-ranking techniques

Gained exposure to AI deployment, monitoring, cost optimization, and scalability

Contributing to a capstone project focused on building a real-world, end-to-end AI solution

Huawei
3 years 9 months

ZTE / Huawei RAN Back Office Engineer
August 2023 - January 2026 (2 years 6 months)
Cairo, Egypt

Led remote troubleshooting and resolution of 2G/3G/4G/5G node faults, raising network uptime by 10 percentage points.

Performed end-to-end troubleshooting and configuration of RAN elements including BTS, NodeB, eNodeB, gNodeB, BSC, and RNC, addressing alarms, KPIs, and hardware-related issues

Performed 4G site integrations: parameter audit, script creation, and post-acceptance KPI validation for 150+ eNodeBs.

Executed software upgrades & re-homing (LTE & NR): coordinated maintenance windows, pre-checks, rollback plans, and post-upgrade stability monitoring—achieving 99.8 % success rate with zero major incidents.

Monitored daily KPIs (CSSR, CDR, throughput) via UME; launched corrective actions that lifted underperforming cells.

Performed root-cause analysis on VIP complaints, correlating field logs.

RAN Front Office Engineer
May 2022 - August 2023 (1 year 4 months)
Al Jizah, Egypt

Alarm monitoring and 1st level troubleshooting for Huawei, ZTE, and Ericsson (BSC/RNC/BTS/Node B/eNode B/gNode B) Radio Access Network.

Classifying and accordingly dispatching alarms to Field Maintenance team or RAN BO Team.

24 × 7 surveillance of multi-vendor (Huawei, ZTE, Ericsson) alarms; executed first-line fault diagnosis and ticket escalation.

Prepared service-impact and Sector down reports for outages, ensuring management visibility within SLA.

Huawei GNOC
3 years 9 months

Information Technology Technician
August 2023 - January 2026 (2 years 6 months)

Monitored and maintained 500+ RAN network nodes across multi-vendor environments, sustaining 99.5%+ SLA uptime. Applied data-driven root-cause analysis to resolve 200+ complex system failures, reducing MTTR by 25%; authored 50+ troubleshooting runbooks, improving team resolution efficiency by 30%. Analyzed KPI degradation patterns using OSS data and Excel-based dashboards, proactively identifying fault clusters and preventing 40+ outages.

Radio Access Network Engineer
May 2022 - August 2023 (1 year 4 months)

Monitored real-time network performance across 300+ nodes using Huawei OSS tools, triaging faults within a 15-minute SLA; managed 150+ incident escalations/month at 95% first-response compliance. Reduced false-alarm

escalations by 20% through alert threshold refinement based on historical traffic analysis.

Education

Cairo University

Bachelor of Engineering - BE, Electronics and Electrical Communication Engineering Department · (2016 - 2021)
